USZ Universitäts Spital Zürich

EPAs for Anesthesia
- meaningful assessment at your fingertip

Adi Marty, MD MME

Senior Attending Physician Institute of Anesthesiology

Director Medical Education Simulation Center

University Hospital Zurich

Chief Visionary Officer @ precisionED AG

Member of SIWF EPA Review Committee

Virtual SIWF EPA Workshop, January 14, 2021

the problem

- Competence can't be seen

- we need workplace-based assessments (for the „Does" level on Miller's Pyramid)

- busy clinical environment

- nobody likes extra administrative work

- not clear on which clinical situations which WBAs can be done

➢ WBAs are not done

➢ Feedback conversations don't happen

➢ Training is less efficient

➢ Patient safety might be at stake
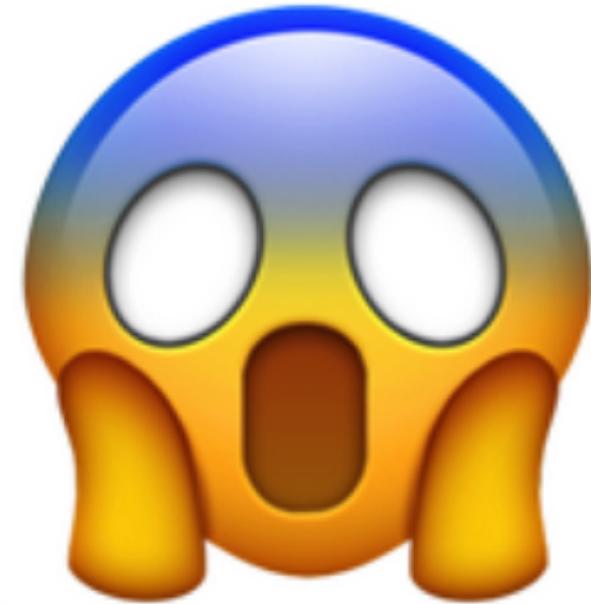

the solution ~~the problem~~

- Create an intuitive mobile application (www.prepared.app)

- Include **ALL** possible professional tasks as EPAs (about 100)

- Choose training institutions to participate (e.g. USZ, LUKS, KSW, HVS, KSB)

- Voluntary participation by trainees and supervisors (no instructions, no faculty development)

the solution ~~the problem~~

➢ 2800 WBAs in 18 months (most of them at USZ)

➢ 20 WBAs per trainee (between 0 and more than 100pa)

➢ 1-5min per WBA (depending on amount of feedback)

➢ High or very high usability

➢ Increased feedback quality
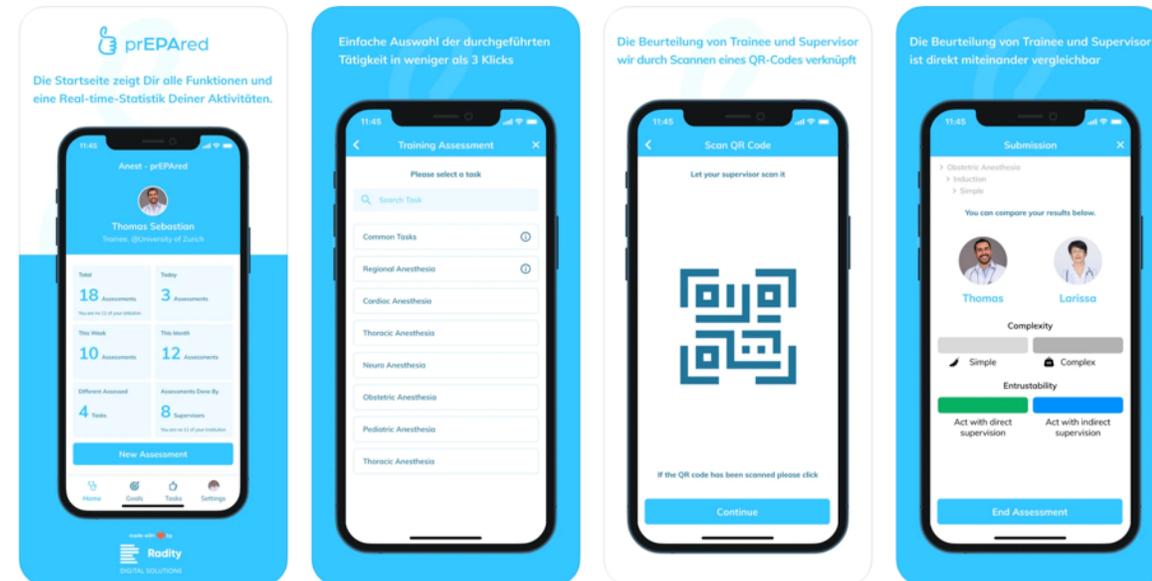

prEPAred
